Start your pet on Pet Wonder today and add years of a healthy quality of life. Other pets are gaining relief already. Doesn't your pet deserve the same treatment? Call today for a Pet Wonder distributor or store near you.

Pet Wonder^â contains glucosamine sulfate, chondroitin sulfate and shark cartilage, three of the leading natural anti-inflammatory ingredients for dealing with arthritic pain

Company Information

Northern Seas Products has been designing, developing and producing specialized innovative, natural formulas for the past seven years. Initially, the company specialized primarily in shark cartilage products for human consumption before expanding its product line to include several formulas addressing such ailments as cancer, arthritis, tendonitis and prostate problems. Pet Wonder was established to provide a presence in the alternative pet food market for products similar to those found to be very beneficial for humans.

What are Others Saying About This Product?

I have a 10-year old Miniature Schnauzer who over the past few years has developed several lumps which the vet says are fatty deposits. In March, the vet removed four of these lumps, one of which returned at twice the size. Deciding not to take my little dog back for more operations, I sought an alternative procedure and started mixing a tablespoon of Northern Seas's equine/ canine product into her food just over two months ago.

Over the past two months I have noticed that the lumps have not become any larger and seem to be flattening out. They are also not as round as they used to be before I started her on the product. Her overall health has also improved, especially her hind legs, which previously seemed to be failing her as she moved up and down the stairs. They now seem to be much stronger.

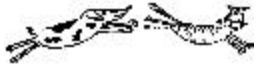

Since she seems to like the product and the lumps appear to be shrinking, I plan to continue feeding the Northern Seas product to her to see how the lumps react over a longer period of time.

This letter is to convey the results of using your product Glucosamine and Chondroitin Sulfate with Shark Cartilage. My Labrador dog has a condition called O.C.D. (Osteo Chondritis Disicans) in his right shoulder. With exercise he becomes noticeably lame.

I began giving him four capsules daily approximately 5 years ago. Within 1 week the lameness was gone. I now only give him 1-2 capsules daily. He is now seven years old and runs every day. I have clocked him at 40Km/hr. If I miss giving him his capsule daily the lameness returns in 2—3 days. As a veterinarian I strongly recommend this product for lameness.

Dr. C.M. Smith, DVM, London, ON

What is Pet Wonder and How Can it Help My Pet?

Pet Wonder is a natural health product designed to assist your dog or cat overcome arthritic problems induced by aging. Pet Wonder contains **glucosamine sulfate**, **chondroitin sulfate** and **shark cartilage**, the three top natural ingredients for fighting arthritic problems, particularly inflammation and pain. The product is completely natural with no side effects and can help restore your pet's vivaciousness, energy and health to the level of a puppy or kitten. Your pet will feel young again and provide you with extended years of companionship, and you will save on veterinarian bills and prescriptions.

Over an active life your pet's joints can break down in similar ways to a human joint, with a reduction of membrane tissue between limbs, as well as deterioration of interspatial (synovial) fluids. This leads to pain and discomfort, and therefore the reluctance or inability for your pet to be mobile or move around the house. This can be demoralizing for both the pet and owner, who may also wish to continue walking or exercising with the animal.

Pet Wonder can help change this degeneration of your pet's health and rejuvenate both its health and your happiness. Your pet will thank you with added spirit and energy. It will turn it into the puppy or kitten it once was.

Pet Wonder is completely natural and costs a fraction of many pharmaceuticals or veterinarian procedures. Furthermore, Pet Wonder helps restore your pet's health, not act as a band-aid solution to mask problems in the short-term. The product is available in capsules so you can easily mix the capsules into your pet's food or feed directly on a daily basis.

Role of Glucosamine & Chondroitin Sulfates

Glucosamine Sulfate is a naturally occurring amino sugar found naturally in the body and is an integral part of the "glue" which holds tissue cells together. It is also one of the biological chemicals that forms the major cushioning ingredients of the synovial fluids in the joints and surrounding tissues. By adding natural body ingredients such as glucosamine sulfate and protein back into the system, the mobility and cushioning of arthritic joints is enhanced.

Chondroitin sulfate is the key part of the proteoglycans, a key component of natural body cartilage. The development of excess free radicals can trigger the release of damaging enzymes which break cartilage down as well as inhibit the body's natural production of proteoglycans. They may also block the transport of much needed nutrients to the damaged cartilage. Excess free radicals are caused by infection, diet and general wear and tear. By reintroducing chondroitin sulfate into the body, the release of these damaging enzymes can be inhibited. Taking additional chondroitin sulfate may aid in restoring the normal chondrocyte metabolism, and thus may help stop the natural breakdown of cartilage.

Function of Shark Cartilage

Shark Cartilage is an excellent source of natural **protein**, the essential ingredient for repair and maintenance of damaged body tissues suffered from the wear and tear of everyday activities. Protein also plays an important role in the formation of the skin, hair, connective tissue and the nervous system. High level protein intake is necessary for the development of muscle strength and stamina in larger animals. Shark cartilage is also an excellent natural source of **mucopolysaccharides** which ensure blood vessel elasticity and haemoglobin production, thus ensuring proper oxygen transport throughout the vascular system. This is essential in addressing such ailments as reduced power and stamina.

The abundant natural **carbohydrates** found in shark cartilage serve as additional readily available energy, similar to pasta carbohydrate loading employed by human athletes.

Natural Chondroitin Sulfate

Shark Cartilage also contains approximately 8-15% natural chondroitin sulfate, raising the overall product content of this powerful ingredient. More importantly, this natural chondroitin sulfate has smaller molecules which are broken down and digested more easily than traditional chondroitin sulfate (derived from bovine or swine) additives by both humans and animals.

Results

Pet Wonder was subject to a controlled trials over a period of a year with the participation of several dogs and cats of various sizes. In most cases, the effects of the product were noticeable in three to four weeks with regular use. In no cases were any side-effects noted

Over the past two years many elephant trainers and zoo keepers worldwide have been employing this product in larger quantities (**Super Sea Horse**) to help promote relief to large animals such as **horses, elephants and giraffes** suffering from health problems, in particular arthritic conditions. This unique combination has also been employed by human customers over the past several years to offset the effects of arthritis.

If you would still like further information, please give us a call on our toll-free line and we will be happy to discuss the benefits of the product with you. We are sure that you and your pet will be excited about the results it will bring.
